- Ability to independently manage deadlines

Projects

Afg_Pro Sales Portal
- Used Python, JavaScript, HTML, CSS, and Django to create a responsive-design online store, with a customer sales portal and manager-side controls
- Programmed customer-side controls such as registration, login, ordering, and access to order history
- Created administrative-side controls, containing all access needed for a manager to run the business, including access to orders, the customer database, and inventory
- Designed an administrator dashboard, displaying all delivered, pending, and out-for-delivery orders with associated customer information
- Coded a product menu, allowing staff-side users to append, delete, and edit products

Portland Historical Tour
- Used HTML and CSS to make a responsive-design website for a touring company, allowing users to make reservations, and contact the company with questions
- Featured three historic tours of Portland on the website, as well as pictures, descriptions, and interactive reservation creation
- Coded the website to be responsive, allowing for viewing in a browser window of any size
